

Session:14

1. Write 5 songs to `my_playlist.txt`

```
# Task 1: Write songs to file

songs = [
    "Blinding Lights",
    "Shape of you",
    "Believer",
    "Levitating",
    "Perfect"
]

with open("my_playlist.txt", "w") as file:
    for song in songs:
        file.write(song + "\n")
```

2. Read file and print songs in uppercase

```
# Task 2: Read and print in uppercase

with open("my_playlist.txt", "r") as file:
    for line in file:
        print(line.strip().upper())
```

3. Read CSV and print winning team

Example CSV format (`ipl_matches.csv`)

```
Match,Team1,Team2,Winner
1,MI,CSK,CSK
2,RCB,KKR,RCB
3,GT,RR,RR
```

Python code:

```
import csv

with open("ipl_matches.csv", "r") as file:
    reader = csv.DictReader(file)

    for row in reader:
        print(f"Match {row['Match']} winner: {row['Winner']}")
```

4. Read JSON user profile

Example `user_profile.json`

```
{
    "username": "john_doe",
    "followers": 1250,
    "bio": "Love cricket and coding"
}
```

Python code:

```
import json

with open("user_profile.json", "r") as file:
    data = json.load(file)

print("Username:", data["username"])
print("Followers:", data["followers"])
```

5. Check file existence using pathlib

```
from pathlib import Path

file_path = Path("zomato_orders.json")

if file_path.exists():
    print("File found: zomato_orders.json exists in the directory.")
else:
    print("File not found: zomato_orders.json does not exist.")
```
