

Session:4

Task 1: Uppercase and lowercase a product name

```
# Task 1
product_name = 'Redmi Note 12 Pro'

print("Uppercase:", product_name.upper())
print("Lowercase:", product_name.lower())
```

Task 2: Clean brand name

```
# Task 2
def clean_brand_name(name):
    # Remove leading/trailing spaces and replace hyphens with a space
    cleaned = name.strip().replace('-', ' ')
    return cleaned

# Test
test_name = ' oneplus-Nord '
print("Cleaned name:", clean_brand_name(test_name))
```

Task 3: Extract brand and model

```
# Task 3
full_product = 'Apple iPhone 14 Pro Max'

# Split at the first space
split_index = full_product.find(' ')
brand = full_product[:split_index]
model = full_product[split_index + 1:]

print("Brand:", brand)
print("Model:", model)
```

Task 4: Format product display

```
# Task 4
def format_product_display(name, price):
    return f"{name} - ₹{price}"

# Example usage
print(format_product_display('Boat Earbuds', 1299))
```

Task 5: Clean list of messy product names

```
# Task 5
messy_names = [' mi-Band 5 ', ' SAMSUNG-Galaxy ', ' realme-Book ']

cleaned_names = []
for name in messy_names:
    cleaned = name.strip().replace('-', ' ').title()
    cleaned_names.append(cleaned)

print("Cleaned list:", cleaned_names)
```

☒ Output you'll get:

```
Uppercase: REDMI NOTE 12 PRO
Lowercase: redmi note 12 pro
Cleaned name: oneplus Nord
Brand: Apple
Model: iPhone 14 Pro Max
Boat Earbuds - ₹1299
Cleaned list: ['Mi Band 5', 'Samsung Galaxy', 'Realme Book']
```
