

## Session:8

### 1. Total order value using a for loop

```
order_amounts = [120, 250, 90, 310, 150]

total = 0
for amount in order_amounts:
    total += amount

print("Total Order Value:", total)
```

---

### 2. Print scores using while loop until score > 100

```
scores = [45, 78, 102, 34, 67, 89]

i = 0
while i < len(scores):
    if scores[i] > 100:
        break
    print(scores[i])
    i += 1
```

---

### 3. Flipkart cart total using continue

```
prices = [299, 499, 199, 999, 149]

total = 0

for price in prices:
    if price < 200:
        continue
    total += price

print("Total Cart Value:", total)
```

---

### 4. Songs with playlist position using enumerate()

```
songs = ['Kesariya', 'Believer', 'Shape of You', 'Blinding Lights',
'Excuses']

for index, song in enumerate(songs, start=1):
    print(index, song)
```

---

### 5. Categorize Instagram followers

```
followers = [120, 1500, 23000, 800, 45000]

for count in followers:
    if count < 1000:
        print("Micro")
    elif 1000 <= count <= 10000:
        print("Influencer")
    else:
        print("Celebrity")
```
